Dear Recruiter:

I am interested in applying the software engineer position at your company, which you have posted on the recruiting web page.

I am a second year PhD student at the technology information management department of University of California, Santa Cruz. My research experiences are focused on big data mining, machine learning, information retrieval and data analysis fields. I am very excited to apply the machine learning theories into practical areas. Therefore, I decide to quit my PhD and look for an opportunity to develop my skills in the industry.

I offer familiar knowledge in Machine Learning, Large Scale, Data Mining, Information Retrieval and related fields, proficient programming skills, and good written and verbal skills. Specially, I have 8 years experience in software development and more than 5 years experience in Big Data Mining and Machine Learning fields. I am proficient at several kinds of programming languages, such as Java, C++, Python, R and so on, and I am also familiar with many applications, such as Hadoop, Mahout, Weka, Linux and so on. Besides, from two years data engineer internship at Cisco, I gained a lot of industry experiences about data analysis and application.

I am currently available for an interview scheduled at your convenience. I have attached my resume detailing my academic knowledge and my technical skills. I greatly appreciate your consideration and time.

I look forward to talking with you soon.

Sincerely,

Shuang Wang.
